Ministry client review

Kingsben + your assisting agent. Verify what exists, reproduce defects, then make small Flutter repairs. Complete one slice before moving to the next.

FLUTTER ONLY. Web is read-only reference. No API, permissions, database, Firebase, signing or production changes.

Task branch: codex/flutter-kingsben-ministry-review

PR target: codex/flutter-latif-review-fixes

Start with: docs/flutter-team/KINGSBEN_MINISTRY_AGENT.md

1 / Dashboard and Analytics

Check truthful national totals, all seven statuses, date/dimension controls, empty versus unavailable data, refresh/retry and drill-down. Preserve the shared live snapshot; never invent trends or comparisons.

2 / Performance and Municipality Detail

Check region/metric filters, cancelled picker selection, search/no-match, long content and Back restoration. Preserve real officer contact permissions and dial/SMS failure handling.

3 / Reports Overview and Insights

Check search/filter state, status/date badges, honest summaries, empty/error/retry and large text. Keep report rows read-only and insights deterministic; no new AI or approval features.

Evidence required

Use labelled isolated fixtures first. Check both themes, 320/390/412/768px, 1x/1.5x/2x text, keyboard and Back. Add regressions for reproduced defects. Run affected tests, then the full Flutter suite, analyzer and whitespace check before pushing.

Deliver and stop

Keep scoped commits and record progress in docs/flutter-alignment/KINGSBEN_MINISTRY_PROGRESS.md. Open one PR to the working branch with fixes, exact tests, screenshots and honest blockers. Separate automated results from device/owner acceptance. Francis reviews; do not merge or deploy.

Reserved for Francis: the two new Admin audit/permission reports and Activity PTR placement. Do not change shared controls, auth/session policy or other modules. The previous PR21 task branch is retired.
