CIVICVOICE / CONTRIBUTOR BRIEF

Kingsben - Flutter work pack

Maintenance + Municipal | 31 October 2026

Check the current implementation, fix confirmed Flutter issues and return small, tested changes for Francis to review. Work through the three slices in order.

Your branch	codex/flutter-kingsbeng-maintenance-municipal
PR target / base	codex/flutter-latif-review-fixes

01 Maintenance client workflow

Queue 02 / T01-T04

Assigned Tasks, Task Details, Update Progress and submitted/returned outcomes. Check filters and refresh, photo add/remove/replace, notes retention, failed or uncertain saves, confirmations and Back. Preserve existing completion rules and awaiting-confirmation behavior.

02 Municipal client workflow

Queue 03 / M01-M06 client scope

Review, verification, assignment, progress, approval/send-back and final details. Check ownership/conflict feedback, permitted actions, evidence and contacts, confirmations/cancellation, failures and return navigation. Use existing API behavior unchanged.

03 Layout and state review

Queue 23 / these two modules only

Review narrow and wide layouts, both themes, larger text, keyboard, safe areas and long content. Check real loading, empty, error, pending and returned states. Preserve accepted cards, Ghana loaders, search/filter behavior, haptics and native Back.

Boundaries

No API/backend work. Web is read-only reference. Report backend/shared-file blockers to Francis. No production/configuration changes, role/account changes or invented test records. Leave the deferred info-button idea alone.

Start and hand back

Fetch your published task branch and give your agent the guide below. Record baseline checks, work one slice at a time, and update **KINGSBENG_PROGRESS.md**. Run relevant regressions, the final Flutter suite and analyzer. Provide screenshots and separate automated checks from device evidence. Make scoped commits, push your task branch and open a PR to the target above. **Francis reviews and decides whether to merge.**
